

The rugged P333 bulk forklift container handles large loads of products of all kinds.

An optional, hinged panel invites quick inspection without removing the lid.

Optional casters allow manual handling when empty, optional fork safety tubes help secure load.

Overview: This rugged, durable bulk container made of High Density Polyethylene (HDPE) has features that contribute to easy lifting and storing and is taller than the P291. A special and exclusive metal additive has been added to this product to ensure that any potential poly contamination in a food product is easily detectable. It ensures proper adherence to HACCP (Hazard Analysis Critical Control Point) programs to prevent plastic contaminated products from reaching the consumer.

Benefits: Built with two-way fork access to make lifting easier and safer, the P333 is also nestable for better shipping, handling and storage when empty. All P333's come standard with a rotomolded lid, allowing them to be easily stacked when full. The smooth poly interior ensures complete emptying every time.

Standard Features

- Rotationally molded from waterproof, chemical-resistant High Density Polyethylene (HDPE)
- Durable, removable, companion lid
- Two-way fork access
- Smooth interior for complete emptying

Featured Options (May affect shipping weight)

- Stencil, Mold-in or Mold-on text, logos or graphics
